

The figure displays a complex network graph with two primary clusters of nodes. The left cluster is composed of blue nodes with green borders, while the right cluster consists of blue nodes with red borders. Each node is labeled with a numerical ID and a type designation, such as '128 (type2)' or '95 (type1)'. The nodes are densely interconnected by black lines, forming a complex web structure. The graph shows a high degree of connectivity within each cluster and between the two clusters, with many lines crossing between the two groups. The overall layout is somewhat circular, with the clusters positioned on the left and right sides of the image.
